Description

The *K MUNGG®* is a continuously working mortar mixing pump, that enables easy mixing, pumping and spraying (with additional air compressor) of machine use dry mortar.

The drive is easy to service with only one motor. The dry mortar or cement is filled via a filling grid in the hopper. From there, the steel screw conveyor of the conveyor mixer feeds the dry material in the mixing chamber, where it is continually mixed with the injected water.

The patented, tension clamp-free and maintenance-free pump part sucks the material and pumps it with up to 40 bar up to $100 \, \text{m}$ wide. The flow rate can be made variable through the use of various types of pumps (MP 2-MP10).

Main advantages

- Modular construction system
- Quickly dismantled and transported
- Lower filling height and total height
- Universally applicable
- High pump power
- Easy operation and maintenance
- Quick start and cleaning time
- Lightweight and compact design
