

# YOUR BENEFIT

FROM OUR EXPERIENCE

*The complete system from Kuechler Technik AG provides engineers, designers and contractors short decision-making processes and uncompromising quality and reliability, all coming from a single source. The company's coordinated components increase efficiency and help with the adherence to construction schedules. An efficient logistics and spare parts stock also ensure high product availability.*

### **Anchoring systems with system**

Küchler AG manages an anchoring system that offers a solution for every task in civil engineering: anchor piles, pre-stressing anchors, micropiles, anchor nails, earth expanding anchors, infiltration, etc.

### **Drilling technology for every application**

On the Swiss market Küchler AG represents leading drill manufacturers such as "Comacchio", "Eurodrill» -hydraulic hammers and rotary drives, "Boart Long-year-OD-systems", "Rockmore" rock drilling tools and «TM Anbaulafetten».

### **Measurement technology for safety and quality**

The Küchler AG measurement technology system enables the testing of anchors, which is an invaluable advantage to a construction project with regards to safety and quality. Anchor and pile tests according to SIA standards bring assurance for all future phases of construction. The results are recorded on standardized forms and delivered on demand in digital form to the customer. In addition, systems for long-term observation of anchors are available such as the Küchler load cell or the digital inclinometer. Data can be recorded continuously for fixed measurement systems and the behavior of the anchor fully documented.

### **Injection technique: Many years of innovation**

Specialists from Küchler AG have been installing injection material and injection equipment for many years. Using our experience and feedback from customers we have been able to develop our own products, which in turn meet market requirements. Whether a small pump or complete injection system with silo – the mortar and injection equipment together with the anchor system form a perfect unit. Küchler Technik AG also focuses on the future, through training apprentices, the establishment of a drilling service center, own patents, etc.
